PFEIFER-RENFROE Accessories and service	88
Rail grabs	89
Section grabs.....	90

- Whether for sheet metal, girders, rails or other structural steel elements ...
- Whether for 0.3t or 100t ...
- Whether for horizontal or vertical transport...
... this is where you will find the correct clamp or grab.
- PFEIFER-RENFROE lifting clamps are designed according to American safety standards and therefore last demonstrably longer, meaning that they are cost effective and safe, especially for tough operating conditions. 40 years of sales success on four continents for PFEIFER-RENFROE lifting clamps are its proof.
- PFEIFER-RENFROE, the safest way of lifting steel!

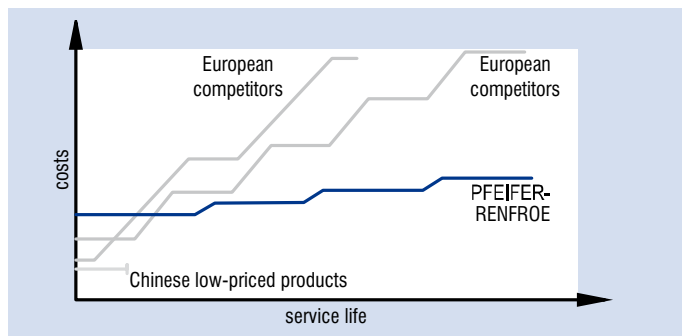

Interesting facts about the use of lifting clamps

“Low-priced” could become dangerous!

The lifting clamps by PFEIFER-RENFROE comply with the European Standard EN 13155, with ASME B30.20 and with the Australian Standard AS 4991. As a result the clamps meet the highest and hardest requirements across the world. Our lifting clamps are the best on the global market and are characterised by long life cycles, reliability and the maximum possible safety. PFEIFER-RENFROE lifting clamps are the perfect choice because of the following factors:

- low wear
- economic spare part kits
- 100% CE-conformity

PFEIFER-RENFROE lifting clamps are an economic choice, because “low-priced” can get expensive!

Working principle of a lifting clamp

The lawmaker demands a minimum safety factor of 2 for lifting clamps, which means $H=2 \times G$.

This is only achievable if $\mu_1 = \mu_2 = 1.0$. As a result the cams have to penetrate the surface of the load. Gripping elements of PFEIFER-RENFROE have a hardness of up to 600 HB. For safety reasons the permissible load hardness is limited to 300 HB. The exact hardness of steel sheets is usually not defined on site. Some competitors allow a load hardness of 345 HB together with low-quality gripping elements. Whom you trust, is for you to decide.

PFEIFER-RENFROE advantages

- ▶ Very long service life due to use of quenched fine-grained structural steels
- ▶ Economically priced spare part kits
- ▶ Few instances of downtime
- ▶ 3 years warranty*, without contractual obligation warranty
- ▶ 5-year free factory inspection **
- ▶ relaxed feeling for sleeping well

* except wear parts
** Carriage and repair not included.

Every lifting clamp is manufactured at the PFEIFER headquarters in Memmingen

Lifting clamps and grabs

Instructions for the use of lifting clamps

Points to be considered:

- For generating enough force “K” with the given set of levers, the load must weigh a minimum of 10% of the nominal carrying capacity of the clamp. This means that the minimum load that should be lifted with a 1 tonne-lifting clamp is 100 kg.
- During the lifting process with clamps, presence of personnel under the load and/or within the danger zone is not allowed.
- Use lifting clamps in the temperature range from -20°C to $+100^{\circ}\text{C}$ (ambient or load temperature)
- Max. permitted surface hardness of load 300 HB

new!

Almost all lifting clamp bodies are powder-coated

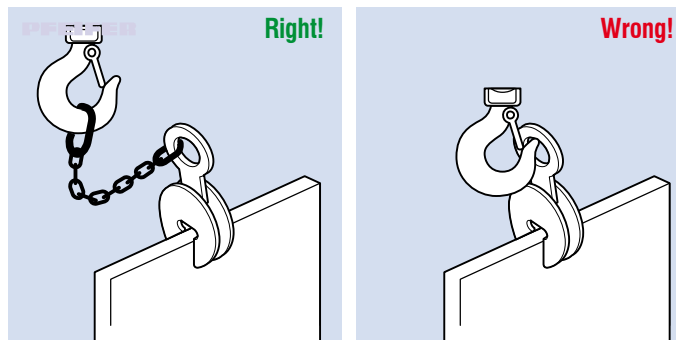

- for better corrosion prevention
- and even more durable lifting clamps

Notes on the use of attachment devices

Important information for you:

Never engage clamps directly into the crane hook but connect them via a suitable lifting sling. Make sure that the master link is big enough for the crane hook.

Attachment possibilities

Single-leg lifting chain with connecting link

Single-leg lifting chain with load hook

The component dimensions are given on pages 182–183.

Which clamp model to connect with which chain?

Nominal chain size mm	MPS ES-1	MPC EC-1	G2	CS	NM	SCP SCPA	SP	ASTS ASTL WHS	M	H
6	–	–	–	–	–	–	0.3 t	0.5 t	–	0.25 t
8	1.0 t	–	–	–	–	0.5 t	–	1.5 t	–	0.5 t
10	–	1.0 t	–	0.5 t	1.0 / 2.0 t	1.5 t	–	–	0.5 / 1.0 t	0.75 / 1.5 t
13	2.0 t	2.0 t	–	–	4.0 t	3.0 t	–	3.0 t	2.0 t	3.0 t
16	3.0 / 5.0 t	3.0 t	6.3 t	–	–	6.0 t	–	–	4.0 t	4.0 t
19	–	5.0 t	10 t	–	–	–	–	–	–	–
22	–	–	12 t	–	–	10.0 / 15.0 t	–	–	–	–
26	–	–	–	–	–	–	–	–	–	–

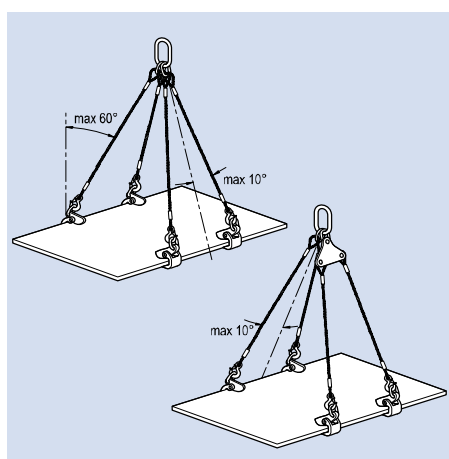

Note the angle of inclination!

For vertical lifting clamps with fixed suspension it is not allowed to pull at an inclination of more than 10° (please see picture on the left). The suspension is not designed for diagonal pull.

When operating with two clamps in a double stranded sling the clamps must be attached in line with the inclination of the sling. Another possibility is to use clamps with a pivoting lifting shackle (MPC, CS, CA).

For horizontal lifting clamps (H, M, WHS) the indicated working load limit is valid for an inclination angle of 30°. Inclination angles with more than 30° increase the working load, which means a reduced working load limit of the lifting clamps. At 45° the working load limit of the lifting clamp is reduced to 70% of the rated capacity whereas at 60° it is only 50%. Please mind!

In general

Please ensure that the working load of the lifting clamp is in accordance with the rope or chain sling. The combined working load of a lifting clamp attached to a sling decreases depending on the angle of inclination.

PFEIFER-RENFROE

lifting clamps

Series MPS/MPC
The special modular design

The modular design of the lifting clamps enables easy exchange of damaged/defective wear parts. The spare parts are offered in conveniently assorted sets. Moreover, gripping elements suitable for different hardnesses being interchangeable allows the same clamp to be used for lifting sheets with varying hardnesses.

For very hard loads, e.g. Hardox 400, we offer extra hard gripping elements. In order to avoid contact corrosion, you can also choose stainless steel gripping elements.

Gripping elements	1t	2t	3t	5t	Hardness up to
Standard	163348	163350	163351	170713	300 HB (32 HRC)
Extra hard	179415	196741	179416	196742	450 HB (45 HRC)
Stainless steel	211402	211590	211618	211650	300 HB (32 HRC)

For reference numbers please see the spare part list.

Spare part lists and explosion drawings of all clamp models are available on our website: www.pfeifer.de

Lifting clamps and grabs

PFEIFER-RENFROE clamp model MPS 1

with rigid lifting shackle

For vertical lifting and 180° turning of sheets, steel plates, girders and structural steel elements.

The "lock closed" feature guarantees the clamp to firmly grip the load even under unintentional release.

The MPS model series replace the former models G1, G3 and BDS with extended operating features.

Also available for super-hard loads up to 450 HB and with stainless steel gripping elements (see Page 77).

PFEIFER-RENFROE clamp model MPS 2

with rigid lifting shackle

For vertical lifting and 180° turning of sheets, steel plates, girders and structural steel elements.

With "lock closed" and "lock open" feature enabling the clamp to firmly grip the load even under unintentional release. In "lock open" position the clamp can be advanced to the load, attached and locked.

Once the load has been set down and secured, the clamp – locked in the open position – can be lifted off by the crane.

The MPS model series replace the former models G1, G3 and BDS with extended operating features.

Also available for super-hard loads up to 450 HB and with stainless steel gripping elements (see Page 77).

For the main use of the MPS model series please see the attached drawing and the chart on page 87.

PFEIFER-RENFROE clamp model MPC 1

with pivoting lifting shackle

For vertical lifting and 180° turning of, and lateral attachment to sheets, steel plates, girders and structural steel elements.

The "lock closed" feature guarantees the clamp to firmly grip the load even under unintentional release.

The MPC series replaces the following clamp models: CS and CA 2 with extended operating features.

Also available for super-hard loads up to 450 HB and with stainless steel gripping elements (see Page 77).

For main use of the MPC model series please see the attached drawing and the chart on page 87.

PFEIFER-RENFROE clamp model G2

for heavy-duty lifting

Extremely sturdy and capable for lifts up to 100 tonnes.

Suitable for the vertical lifting and 90° turning of sheets, steel plates, girders and structural steel elements.

The lifting clamp incorporates the “look open” and “lock closed” feature. After relieving and securing the load, the clamp can be lifted off with a crane.

Can be released remote-controlled through a “tag-line”.

The model is equipped with rollers from 10 tonnes lifting capacity and above. This is to assist in moving the clamp on the ground.

For wider loads we recommend the use of clamps in pairs attached to a double-leg sling or to a spreader beam.

PFEIFER-RENFROE clamp model CA

with pivoting lifting shackle and clever pressure distribution

The large cam jaw enables wide pressure distribution and thus guarantees careful handling of your sensitive goods.

For vertical lifting and 180° turning of sheets, steel plates, girders and structural steel elements. The pivoting shackle enables easy handling due to unmatched attachment angles. Even lateral attachment to the load is allowed.

The lifting clamp incorporates the “look open” and “lock closed” feature. After relieving and securing the load, the clamp can be lifted off with a crane. Can be released remote-controlled through a “tag-line”.

For wider loads we recommend the use of clamps in pairs attached to a double-leg sling or to a spreader beam.

Lifting clamps and grabs

PFEIFER lifting clamp model SG

Lifting clamp with large, coated gripping pads for materials with sensitive surfaces.

Suitable for the vertical lifting and 180° turning of sheets, steel plates, girders and structural steel elements. Also suitable for materials with sensitive surfaces (stainless steel, plastic and particle board etc. – not for polished surfaces!). The lifting clamp is operated by slewing the handle, no adjustment is necessary. The load surfaces must be clean, dry and free of lubricating grease.

For wider loads we recommend the use of clamps in pairs attached to a double-leg sling or to a spreader beam.

PFEIFER-RENFROE clamp model NM

Lifting clamp with large, smooth gripping pads for metals which have sensitive surfaces or which are hard.

Suitable for the vertical lifting and 90° turning of sheets, steel plates, girders and structural steel elements.

The jaw can be pre-adjusted to any gripping range using an adjusting screw. After attachment, the adjusting screw must be tightened. The load surfaces must be clean, dry and free of lubrication grease.

For wider loads we recommend the use of clamps in pairs attached to a double-leg sling or to a spreader beam.

PFEIFER lifting clamp model SP

Vertical turning lifting clamp with safety device, lock-closed feature.

Suitable for the lifting and 90° turning of materials with sensitive surfaces (stainless steel, plastic and particle boards etc. – not for polished surfaces!). The specially coated gripping pads can be continuously adjusted with an adjusting screw.

For wider loads we recommend the use of clamps in pairs attached to a double-leg sling or to a spreader beam.

PFEIFER-RENFROE clamp model CS

with pivoting lifting shackle

Lifting clamp with universal joint, safety device, lock-closed feature. The lock-closed feature also holds the clamp tight when the load is unintentionally released.

Suitable for the vertical lifting and 180° turning of sheets and girders.

The pivoting shackle enables easy handling due to unmatched attachment angles. Even lateral attachment to the load is allowed.

PFEIFER-RENFROE clamp model H

Horizontal lifting clamp for handling inherently stacked bundles of sheets and steel plates.

The lifting clamps are fastened to suitable slings and attached at three or more points on the load being handled.

With long loads, we recommend using a spreader beam.

PFEIFER-RENFROE clamp model WHS

High-performance horizontal lifting clamp for transporting dimensionally stable sheets and sheet stacks.

Its particular advantage: using a locking pin, the gripping range can be quickly changed from 0 to a maximum of 406 mm.

Integrated springs hold the gripping cams open and facilitate attachment.

The lifting clamps are fastened to suitable slings and attached at three or more points on the load being handled.

With long loads, we recommend using a spreader beam.

PFEIFER-RENFROE clamp model M

Horizontal lifting clamp for dimensionally stable sheets, sheet stacks and profiles. The wide, split lower jaw is particularly suitable for gripping steel girders, regardless of whether from the side or the end. With safety-latch system; can be locked closed.

Used for handling girders in pairs, for handling sheets and bundles of sheets, slings with three clamps or more.

PFEIFER-RENFROE clamp model SCP

Screw clamp for vertical lifting and 180° turning of metal items of all kinds.
Max. surface hardness of the load 300 HB.
Equipped with a pivoting cam jaw.
Particularly suited for use with rolling and edging machines.

For wider loads we recommend the use of clamps in pairs attached to a double-leg sling or to a spreader beam.

SWL kg	Gripping range A mm	Dimensions in mm							Weight approx. kg	Reference no.

PFEIFER-RENFROE clamp model SCPA

Screw clamp with pivoting suspension eye, for vertical lifting and 180° turning of metal items of all kinds.
Max. surface hardness of the load 300 HB.
Equipped with a pivoting cam jaw.
Particularly suited for use with rolling and edging machines, and for lateral attachment to the load.

For wider loads we recommend the use of clamps in pairs attached to a double-leg sling or to a spreader beam.

PFEIFER-RENFROE clamp model AST-S

Lifting/turning clamp with serrated gripping cams and safety device, lock-closed feature. Holds the girder almost horizontally in both directions. It facilitates the turning process when the lifting shackle is arranged outside the girder.

For wider loads we recommend the use of clamps in pairs attached to a double-leg sling or to a spreader beam.

Lifting clamps and grabs

PFEIFER-RENFROE clamp model B1

Two-part clamp with locking wedge for I-beams which can be attached anywhere on the beam.

The two halves of the clamp are locked with a simple pin lock and then secured with a locking screw. The clamp is locked in place with a locking wedge.

To be used as an assembly clamp only for suspension for all types of hoists. Approved only for mounting on a ceiling girder.

SWL kg	Gripping range A mm	Dimensions in mm				Weight approx. kg	Reference no.

PFEIFER-RENFROE Accessories and service

PFEIFER-RENFROE Spare-part Kit

We facilitate the replacement of wear parts. We offer a spare-part kit for every clamp model in each capacity. It contains the correct gripping segments and associated fixing and fitting components.

Buying this kit will earn you 25% savings as opposed to buying single spare parts.

The complete kit is available for the models G1, G3, BDS, CS, CA2 and G2, CA, SCP, SCPA, H, WHS, M, AST, ASTL, NM, SP, B1 and B2.

Our PFEIFER-RENFROE poster gives information to workers about operating and correct use of our complete range of lifting clamps.

Inspection Service and Training Centre

You are responsible for the required inspection of your PFEIFER-RENFROE clamps by law. Our inspection service is able to support you in this matter. We check, repair and certificate locally (within Germany only). Your employees can add to their technical knowledge leading to increased awareness of safety in your company.

PFEIFER-RENFROE pry bar

With this amazingly simple tool you can prepare plates in stacks easily, quickly and carefully for clamp attachment.

PFEIFER

Lenght extracted	mm	1320

Reference no.		121977

Rail grabs

Automatic rail grab with BAU/TB approval

For lifting and pulling rails lengthways and crossways for rail sizes S49, S54, S60s, UIC60.

Very solid, practical design with low dead weight.

After placing the grab on the load, it locks automatically (in compliance with TBG requirements).

We **warrant** the rail grab **for three years** (except for spare parts).

Always attach the grab above the centre of gravity of the load.
With long loads, we recommend using two or more grabs.

Rail grab

For lifting and pulling rails lengthways and crossways for rail sizes S49, S54, S60s, UIC60.

Very solid, practical design with low dead weight.

Safety device with double function: For holding open and locking under load in order to hold rails securely, even when they are overturning, i.e. the grab cannot open accidentally.

We **warrant** the rail grab **for three years** (except for spare parts).

Always attach the grab above the centre of gravity of the load.
With long loads, we recommend using two or more grabs.

Special gripping arms for handling other rail forms are available.

Lifting clamps and grabs

Section grabs

Rod and bar grab

For horizontal transport of round materials of all kinds.
 Heavy-duty double-scissor design with safety latch.
 Very small external footprint thanks to a new internal contour whose 4-point clamping prevents the load from seesawing.
 Self-acting latched hold-open lever, locking spring stirrup with handle for securing the grab against opening accidentally when the load on the grab is released.
 For design-related reasons, grabs with part no. 114040 and 114049 are supplied without safety device.

Always attach the grab above the centre of gravity of the load.
With long loads, we recommend using two or more grabs.

Section grab

For handling all kinds of double-flange sections and flat materials.
 Mechanically acting for positive interlocked load handling.
 Robust, double-scissor design with safety device and wide load-holding surfaces.
 Self-acting, latched hold-open lever.
 Locking spring stirrup with handle for securing the grab against opening accidentally when loaded.

Always attach the grab above the centre of gravity of the load.
With long loads, we recommend using two or more grabs.
